

The 5 Most Important Things You Should Do To Make Sure Your Company Is Protected From These Types Of Disasters:

While it's impossible to plan for every potential computer disaster or emergency, there are a few easy and inexpensive measures you can put into place that will help you avoid the vast majority of computer disasters you could experience.

Step#1: Make Sure You Are Backing Up Your System

It just amazes me how many businesses never back up their computer network. Imagine this: you write the most important piece of information you could ever write on a chalk board and I come along and erase it. How are you going to get it back? You're not. Unless you can remember it, or if YOU MADE A COPY OF IT, you can't recover the data. It's gone. That is why it is so important to back up your network. There are a number of things that could cause you to lose data files. If the information on the disk is important to you, make sure you have more than one copy of it.

Step #2: Perform A Complete Data Restore To Make Sure Your Backups Are Working Properly

This is another big mistake I see. Many business owners set up some type of backup system, but then never check to make sure it's working properly. It's not uncommon for a system to APPEAR to be backing up when in reality, it's not. Remember, if you're backing up to tape, they WILL degrade over time and MUST be replaced periodically. Investigate other methods of data backup such as USB drive or an integrated back-up and disaster recovery device.

Step #3: Keep An Offsite Copy Of Your Backups

What happens if a fire or flood destroys your server AND the backup tapes or drive? What happens if your office gets robbed and they take EVERYTHING? Having an off-site back up is simply a smart way to make sure you have multiple, redundant copies of your data. Our program allows you to have another server up and delivered with your data to your site within 24 hours.

Step #4: Make Sure Your Virus Protection Is ALWAYS On And Up-To-Date

You would have to be living under a rock to not know how devastating a virus can be to your network. With virus attacks coming from spam, downloaded data and music files, web sites, and even e-mails from friends, you cannot afford to be unprotected.

Not only can a virus corrupt your files and bring down your network, but it can hurt your reputation. If you or one of your employees unknowingly spreads a virus to a customer, or if the virus hijacks your e-mail address book, you're going to make a lot of people very angry and risk action against your company.

Step #5: Set Up A Firewall

Small business owners tend to think that because they are "just a small business", no one would waste time trying to hack in to their network, when nothing could be further from the truth. I've conducted experiments where I connected a single computer to the internet with no firewall. Within hours, over 13 gigabytes of space was taken over with malicious code and files that I could not delete. The simple fact is there are thousands of unscrupulous individuals out there who think its fun to disable your computer just because they can.

These individuals strike randomly by searching the internet for open, unprotected ports. As soon as they find one, they will delete files or download huge files that cannot be deleted shutting down your hard drive. They can also use your computer as a zombie for storing pirated software or sending spam which will cause your ISP to shut YOU down and prevent your access to the Internet or sending and receiving e-mail.

If the malicious programs can't be deleted, you'll have to re-format the entire hard drive causing you to lose every piece of information you've ever owned UNLESS you were backing up your files properly (see 1 to 3 above).

How Disaster-Proof Is YOUR Network? FREE Security Audit Reveals The Truth

Hopefully this report acted as an eye opener to all small business owners who are not adequately protecting their data and computer network. If you are not doing the 5 steps outlined in this report, your network is an accident waiting to happen and the most important thing for you to do now is take immediate action towards protecting yourself.

One of the biggest, costliest mistakes you can make is to ignore this advice with the false hope that such a disaster could never happen to you.

Because you have taken time to request and read this report, I would like to help you make sure your company is safe from harm by offering you a FREE Network Security Audit. Normally I charge \$250 for this type of audit, but during the month of **July, 2009** I'll make room in my schedule to give away 5 of these to small business owners that are concerned about keeping their network and data safe.

During this audit one of our technicians will come on site and...

- ✓ **Pinpoint any exposure or risk** to potential lapses in security, data backup, power outages, and system downtime.
- ✓ **Review your system backups** to make sure the data CAN be recovered in case of a disaster. You don't want to discover that your back ups were corrupt AFTER a major disaster wiped out your network.
- ✓ **Scan your network for hidden spyware and viruses** that hackers "plant" in your network to steal information, deliver spam, and track your online activities.
- ✓ **Outline a powerful and comprehensive line of defense** against even the most evasive and deadly computer viruses, hackers, and spam for your specific network.
- ✓ **Answer any questions you have** about your network or keeping it running problem free. I can also give you a second opinion on any projects you are considering.

Upon completion of this audit, we'll give you a detailed report in plain English that outlines where you are at high risk for viruses, downtime, or other problems, and discuss what options you have for protecting yourself.

Good Networking,

Chuck Micciche
VP Business Development
Drivetech, Inc
978-263-0700
www.drivetech.net

P.S. Please note that this offer for a **FREE Security Audit won't be around forever.** While we would love to be able to give these away to everyone, staff and time limitations simply won't allow it.

That's why we can only give away 15 of these audits during the month of **July, 2009** on a first come, first served basis (sorry, no exceptions). There are zero obligations for you to do or buy anything when you sign up - so do it now while you're thinking about it!

“Yes! I Want To Make Sure My Network And Company’s Data Is Safe From Harm”

Please sign me up for a FREE Security Audit so I can make sure I am doing everything possible to secure my network. I understand that I am under **no obligation** to do or to buy anything by requesting this audit. I further understand that these audits are being made available on a **first-come, first-served basis**. If I am not one of the first 15, please put me on your stand-by list and notify me if a spot becomes available.

Please Complete And Fax Back:

Name: _____

Title: _____

Company: _____

Address: _____
